- Continue lower body and trunk conditioning program

#### 3-4 Months:

- If no swelling and full painless ROM, begin easy tossing (no wind-up)
  - o Start 25-30 throws, slowly build to 70 throws and increase distance
    - Throwing program 3-4 times per week
    - Ice after throwing sessions

<u># of throws</u>	<u>Distance (feet)</u>
10	20 (warm-up phase)
10	30-40
30-40	50
10	20-30 (cool down)

# 5-6 Months:

- Continue to increase throwing distance to a max of 60 feet

  - Stay on top of the ball
  - o Keep the elbow up
  - o Throw over the top
  - o Follow through with the arm and trunk

### **9-10 Months**

- At this time, if the pitcher has successfully completed the above phase without pain/discomfort and is throwing about ¾ speed, pitching coach and trainer may allow the pitcher to proceed to the next step of "Up/Down Bullpens." These are used to simulate a game situation. The pitcher rests in between a series of pitches to reproduce the rest period in between innings.
